

Stationary Balloon Shade Instructions

1. Place the Balloon Shade face down on a table or on the floor.

2. Retrieve the split plastic rings located in a small bag or envelope enclosed in the shade packaging.

Note: The split-rings will be used in conjunction with the plastic fasteners to set the desired length. The stationary Balloon Shade may be hung at full length, leaving the bottom straight, or you may raise it to pre-determined lengths. The manufacturer has set these lengths by evenly spacing clear plastic fasteners in vertical columns on the back of the shade.
(See illustration above).

3. Attach a split-ring to the lowest plastic fastener in each vertical column. Moving up the vertical column, attach the split-ring to the next plastic fastener. Continue up the vertical column until the desired length is achieved. Repeat this procedure with each vertical column, making sure to attach the split-ring to the same number of plastic fasteners in each column. (See illustration below).
