---

Never pull the product from the box by force. Damage of the product may occur.

## How to bend the support bracket to hang your new JasonW Studios® wreath hanger:

---

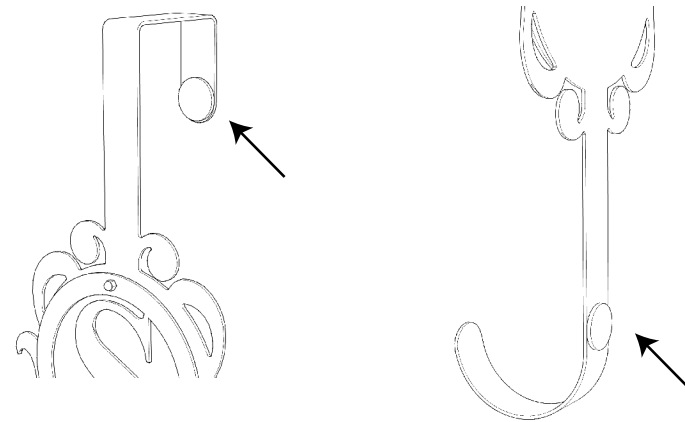

Your wreath hanger was shipped with the hanging bracket bent at a 90° angle which will accommodate most door thicknesses. If the wreath hanger is too loose for your door simply bend the wreath hanger as shown below to the desired angle in order to grip your door more securely.

## Where and how to mount the foam protection pads on your new JasonW Studios® wreath hanger:

---

Make sure the surface of the wreath hanger is clean and dry. Locate the two self adhesive foam protection pads that were packed with your wreath hanger. Remove the backing, and place one pad on the hook portion of the hanger bracket as shown below in the figure on the left. Then, place second pad on the lower portion of your hanger near the suggested area, where maximum contact will occur to protect the door's surface.

---

*Thank you .....*

for purchasing an original JasonW Studios® wreath hanger. Your satisfaction with this purchase is our first priority. This product was designed, manufactured, finished, and boxed right here in Huntingburg, Indiana. We take pride in this American-made product, and we hope you enjoy it for years to come.
